Customized Conference & Event Wi-Fi Without the Hassle

Connectivity demands of conferences and events has never been higher. Yet, delivering the level of Wi-Fi that attendees crave is costly and complex, requiring IT resources every step of the way. ElevenOS *Conference Manager* empowers non-technical users, like front desk staff and meeting planners, to take control and deliver personalized Wi-Fi for all of their events without the need to involve IT for day-to-day network management.

The Leading Group Wi-Fi Management Solution

Enhanced Attendee Experience

Whether its by access code or no portal at all, ensure attendees can access the Wi-Fi without any fuss. Setup custom vanity SSIDs and designate custom landing pages with key event information. Combine Wi-Fi with other services or enable sponsorship of premium connectivity.

Smart & Simple Conference Dashboard

The dynamic web dashboard simplifies management of complex network settings, easily accessible on any device (laptop, tablet or phone). Gain control with user-friendly tools like the ability to customize conference portals, map wired ports, and create new conferences using the step-by-step wizard.

Actionable Reports & Analytics

Analyze Wi-Fi analytics that include bandwidth usage by group and day, a snapshot of recent usage, and user browser and platform types. Understand which groups and individuals are using the most bandwidth and adjust settings on the fly. Segment data by location, event, or group.
